INTRODUCTION

What is Shopping Cart system ?

Online shopping is a form of electronic shopping store where the buyer is directly online to the seller's computer usually via the internet.

There is no intermediary service. The sale and purchase transaction is completed electronically and interactively in real- time.

The development of this new system contains the following activities, which try to develop on- line application by keeping the entire process in the view of database integration approach.

Purchasing of goods online, user can choose different products based on categories, online payments, delivery services and hence covering the disadvantages of the existing system and making the buying easier and helping the vendors to reach wider market.

Abstract

Now a days the life style of the people is different. People feel uncomfortable and time consuming for going crowded markets. So, E-Shopping is a boon as it saves lot of time. Online shopping is a process whereby consumers directly buy goods, services etc. from a seller without an intermediary service over the Internet. Shoppers can visit web

stores from the comfort of their house and shop as by sitting in front of the computer.

Online stores are usually available 24 hours a day and many consumers have internet access both at work and at home. So it is very convenient for them to shop Online. One of the most enticing factors about online shopping, particularly during holiday season is, it alleviates the need to wait in long lines or search from a store for a particular item. Variety of goods are available in online. So the researcher want to know the preference of the consumers.

So few respondents were met and data were collected regarding their preference towards shopping online.

DESCRIPTION

The **Shopping Website** provides help to the customer who are interested in online shopping . There are FIVE modules in this website .

Mainly the name of the Shopping Website is HATkart. In this we are mainly

Related to Fashion brands and partially to other items .

Home:

Home is a complete, featured-packed to view all the necessary modules.

CATEGORY:

It is the section where you can explore all kinds of items that you want to buy and also we can see a sub menu to this category which consist of

Electronics, Men, Women, Baby-Kidins, furniture, TV's, Accessories. The items which are related to these categories can shop here and add it to cart. In Electronics we can see the gadgets like mobiles, laptops etc. In Fashion we can see the clothes and necessary items .In Accessories we can see watches, etc

Cart:

A cart is a piece of software that facilitates the purchase of shopping items . It accepts the customers' payment and organizes the distribution of that information to the merchant, payment processor and other parties. It bridge the gap between shopping and buying.

It stores product information. Its a gateway for order, catalog and customer management. It renders product data, categories and site information for user display.

Account:

This is the private section of the customer which contain the details related to his personal information. For example name ,mobile number, email address, home address where the customer want to deliver, information related to payement details.

PAYEMENT:

This session consists of all your payement details related to your shopping items and also your visa/master /rupay card details from the card which you have done the payement, further we can also change our card details

i.e of adding or deleting a card or we also have an option of payement on delivary which we want to give the cash when the item is handed over to you.

Offer Zone:

In this section, one will receive extraordinary offers in some festive seasons and if you are lucky enough, you tend to get some great deal of vouchers under some Terms and condition applied.

For that we need to insert the necessary data/information of the customer and make sure to press the submit button.

Login & Signup:

In this section, it gives you a page where you want to insert your details and sign up or if you are registered then you can login with your details

And a person can only order if he/she is a registered user!!

This is for the customer to show the orders and payments that is done in past and present, it is a simple way to see your orders .

We can see the web page of the Login and Sign up as we clicked on it which contain the details. For example if we take login we can see the username and password and if we take sign up we can see the name , password, gender, date of birth, phone number and a submit button which will return to main home page .

ADVANTAGES:

- It overcomes all the problems of existing system.
- online shopping can be done in more convenient way.
- Payment can be easily done using various online mode or cash on delivery(COD).
- It makes system very effective for online shopping.
- in this present generation there is no time for shopping by going to malls or shops.so for that it is a easy way and less time to shop and also we can shop in any time (24hrs).

DISADVANTAGE:

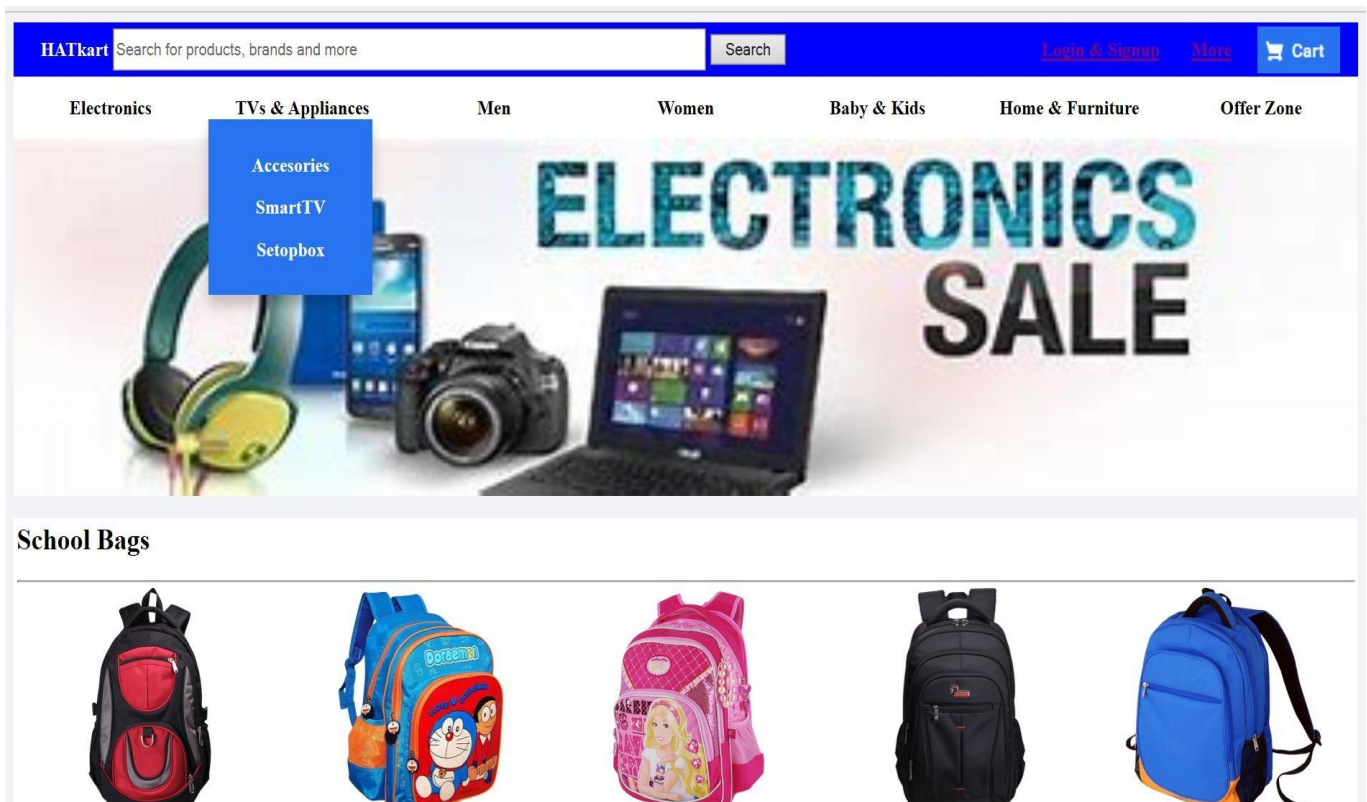

- It requires reliable internet connection.
- System may provide inaccurate results if data not entered correctly.
